ABSTRACT

In this abstract part I have to explain the goals and purpose of my project, title as Phone Repair Management System. The purpose of my project is to develop a windows based computerized system for Zaanath Mobile City from Maruthamunai. The shop is facing some problems by using the manual system. So, I have to develop the computerized system known as Phone repair Management System.

I have used the techniques namely MS Access to develop the database design and Visual studio 2010 to develop the system design. I believes that the new system meets the user requirements and fulfill the shortages of the manual system.
