Abstract

Social and economic growth of a country depends on the development of villages. A country will get thrived when the villages will get prospered. This research has been carried out based on the livelihood condition of the people of village Aligamba. The objective of this research is based on finding their difficulties in water, transport, sanitation, postal service, telecommunications, market, residency, profession, electricity; which they face in their day today life and identifying the reasons for unresolved issues. Primary data were mainly taken and secondary data were used according to the need of the study. Primary data were collected through interview, direct observation and discussion methods. Voter registration, research papers and books were used as secondary data. The day to day difficulties which the people of Aligamba village face in water, transport, health, electricity, education, occupation, super market and habitation were analysed through collected data; and solutions, recommendations were given through this study. Finally, the study found that the livelihood condition of Aligamba is backwarded. Reconstruction of transport routes, establishing industrial diversity, arrangements for emergency treatment, taking necessary actions to provide water facilities to all people, pawing ways for self-employment were the solutions proposed.

Keywords: economic growth, Livelihood condition, Aligambe
